

CONNECT X TO CLAUDE CODE

Connect MongoDB to Claude Code

Six commands, about four minutes. Atlas Managed MCP Server, installed through the official plugin — nothing to host, no connection strings to keep.

BEFORE YOU START

- An Atlas account with one deployment
- Claude Code installed
- Org Owner access in Atlas, or someone who can flip one toggle for you

01 Enable AI Clients

Org Owner, once per org

cloud.mongodb.com → your Organization → **Organization Settings** → toggle **AI Clients** on

02 Install the plugin

In a Claude Code session

```
/plugin install mongodb-atlas@claude-plugins-official
```

03 Apply the changes

Skip this and the server never appears

```
/reload-plugins
```

04 Authenticate

Pick `plugin:mongodb-atlas`, then Authenticate

```
/mcp
```

05 Authorize in browser

Atlas OAuth flow

Click **Authorize**, return to Claude Code, run `/mcp` — the server reads **connected**.

06 Test it

Ask in plain English

```
List my Atlas clusters.
```

```
Show the schema of the 'users' collection and explain each field.
```

```
Show me slow queries from the last 24 hours and suggest indexes.
```

If it doesn't work

SYMPTOM	CAUSE
Authenticate fails, OAuth rejects you	AI Clients still off at org level — step 01
Plugin missing under /mcp	You skipped /reload-plugins — step 03
Writes refused	Read-only enforcement is on for AI clients in your org
Atlas tools missing	Your Atlas identity lacks access to that org or project

Two forks, and where the other path goes

FORK 1 • DEPLOYMENT

We used Atlas Managed

MongoDB runs the server inside Atlas: no install, no secrets, project-level access.

Go **Local MCP** instead for Community Edition, Enterprise Advanced, Atlas Local, or collection-level control — you host it and manage the connection string. [setup guide](#)

FORK 2 • SETUP METHOD

We used the MCP plugin

OAuth tied to your Atlas identity. Tokens refresh themselves; revoke access anytime.

Use the **manual config file** instead when you're wiring a headless or programmatic agent. [setup methods](#)
